Historical Enrollment Data 2008-2017:

North Dakota Department of Public Instruction

Enrollment Projections Methodology 2018-2028:

The traditional Cohort Survival Ratio Method (CSR) was utilized, but because research indicates the CSR method decreases in accuracy for time periods exceeding three years, a series of curvilinear regression models were applied to the variables of birth rate, migration and housing. When applied to historical data for the two districts, the Absolute Mean Error Rate (AMER) for the modified CSR Method was less than 1.8%. Comparatively, the AMER when the CSR Method was applied apart from the regression models was 3.6%.
